

Malaysian Capacity Development Network for Sustainable Water Management

Malaysian Capacity Development Network for Sustainable Water Management (MyCDNet) will be hosting the Training of Trainers (ToT) on River Pollution on the 8th and 9th of November 2017 in Kuala Lumpur, Malaysia.

This training course is part of a collaborative programme between CapNet UNDP, Malaysian Capacity Development Network for Sustainable Water Management (MyCDNet) and Global Environment Centre (GEC) with support from GAB Foundation's WATER Project to capacity build water professionals, capacity builders, local authorities' and others to effectively communicate information in the context of sustainable river pollution management. The first full-day training will be held in Indah Water Training Centre (IWTC). On the second day, participants will get hands-on training under River Ranger Monitoring at Sg Penchala at Bukit Kiara park to measure the quality of the river through physical, chemical and biological monitoring.

The rapid pace of development over the last three decades has overstressed Malaysian river systems. According to the DOE Environmental Report published in yearly basis, the main sources of organic water pollution are domestic and industrial sewage, effluents from agro-industries and animal husbandry. In urban and industrial areas, organic pollution of water from both point and non-point sources have resulted in environmental problems and adversely affect riverine biodiversity. Rivers which pass through urban and human settlements suffer the worst degradation and are subjected to heavy solid and liquid waste disposal from squatter settlements, drainage effluents from commercial and housing areas, food centers, wet markets, and silt loads from land clearing. Rivers need to be managed in an integrated and holistic manner involving all major stakeholders who have interest and benefits from better-managed rivers. The widespread adoption of sustainable water management requires large-scale attitude and behavioural change. The role of effective facilitators who can engage with a broad audience, translate information into meaningful terms, build real interest and a commitment to action, is powerful and effective to effect change and will be emphasized under the TOT on River Pollution.

Date: 8-9 November 2017

Time: 8.30am-4.45pm (Day 1); 9am-1pm (Day 2)

Venue: Indah Water Training Centre (Day 1); Bukit Kiara Park (Day 2)

Fee: RM80 (includes breakfast, tea, lunch)
